MANAGEMENT GAMES

AIRLINE

Can you compete with British Airways? You must decide on the number of aircraft to operate, whether to buy or charter, whether to enter into a loan or a fuel contract and the levels of staffing and maintenance. Problems encountered are tax demands, strikes, cancelled flights, hijacks and aircraft crashes.

AUTOCHIEF

As MD of a Catering Company you must negotiate for leases, decide on menu prices, level of wages, advertising and dividends. Each year you must predict the inflation rate. You are also given options on consignments of wines and food and loan contracts. You will be made to resign if you are not successful. There are 3 levels of difficulty.

PRINT SHOP

You own a small printing company and are required to decide on (a) the number and type of staff you employ and when to increase or reduce staff (b) the amount and type of paper you stock (c) the week in which work is scheduled (d) the quotation for each job (e) cash requirements from the Cash Flow Statement. Are you an entrepreneur? Test your business acumen to the limit! There are 3 levels of difficulty.

These simulations are realistic and are not only fun to play but are educational. The user will learn to interpret Trading Profit and Loss Accounts and Balance Sheets. Our programs are very comprehensive and utilise over 15K. ALL PROGRAMS INCLUDE DETAILED INSTRUCTIONS.

£4.75 for one, £8.00 for any two or £12 for three.

WEEKLY

Discount Club

* 4 Spectrum tapes

Popular Computing Weekly has negotiated a special discount offer on the latest Spectrum tapes from Richard Shepherd Software.

* Save £1.20 on Ship of the Line

Our price £5.30 (List price £6.50) for the 48K version
Our price £3.95 (List price £4.95) for the 16K version
In the massive 48K version of this popular adventure game you have to use your skill and cunning to be promoted from a Midshipman in the Queen's Navy, to First Sea Lord. Can you lead a boarding party? Can you aim your guns? Can you bribe the selection panel when you fail the intelligence test?

* Save £1.00 on Fruit Machine and Submarine

Our price £3.95 (List price £4.95)
This double cassette runs on either the 16K or 48K Spectrum. The main program, **Fruit Machine**, shows the moving reels in realistic high resolution colour graphics. If you are addicted to fruit machines save your money by playing this game on the Spectrum. Includes nudge and hold.

* Save £1.50 on Cash Control

Our price £8.50 (List price £10.00)
This is a comprehensive 48K cash control program. It covers everything from calculating your mortgage to controlling your bank balance and everyday expenditure. It is well cross-referenced and easy to use.

* Save £0.70 on Monster Mine

Our price £4.25 (List price £4.95)
This high quality game for the 16K or 48K Spectrum is written in machine code and is fast. You have to manoeuvre and climb out of a mine-shaft picking up nuggets of gold on the way. All the time you have to move fast to avoid being eaten by the monsters chasing you.

To have these top cassettes sent to your home all you have to do is fill in the form below and send it to Popular Computing Weekly.

Subscriptions

You can have *Popular Computing Weekly* sent to your home: the subscription rate is **£19.95** per year, for addresses in the UK, **£37.40** overseas.

How to submit articles

Articles which are submitted for publication should not be more than 1000 words long.

All submissions should be typed and a double space should be left between each line.

Programs should, whenever possible, be computer printed.

At present we cannot guarantee to return every submitted article, so please keep a copy.

Accuracy

Popular Computing Weekly cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

Editorial

In a week when they found George Washington's teeth, and a boy who is allergic to Scunthorpe, Commodore announced a £30 cut in the price of its Vic20. From September 28 the Vic20 will cost £169.99 including VAT.

This move, which had been rumoured ever since Sinclair launched the ZX Spectrum in April, is an attempt to undercut some of the other low-cost micros on the market. The Dragon 32, the TI 99/4A, the Atari 400 and now the Lynx, are all priced around the £200 mark.

With more micros likely to appear in the near future — they seem to be averaging almost one a week at the moment — the market is becoming increasingly price sensitive.

Commodore has the advantage of an established user base and a wide range of software. But price is still a crucial factor for prospective buyers.

In the past two months, Sinclair has dropped the price of its ZX81 by £20, to £49.99, and Texas Instruments and Atari have cut more than £100 off the price of their micros. Now Commodore has followed suit.

If this competition among micro manufacturers continues, prices may yet drop further.

Vic20 price drops by £30

COMMODORE has announced two moves to boost sales of the Vic20 range of products and software.

The price of the Vic20 is to be cut by £30 to £169.99 including VAT, from September 28. This drop takes the machine out of the competitive £200 region and places it between the two versions of the ZX Spectrum.

Over 55,000 Vic20 machines have been sold in the eight months since its launch, compared with over 40,000 Sinclair machines since Spectrum's April launch.

In the second move, Commodore has set up a Vic20 owners club, Vic-Soft, which will send the first issue of its new quarterly magazine to more than 25,000 Vic20 owners who completed and returned their guarantee cards.

A Commodore spokesman explains "Vic-Soft will be a place where owners will be first to find out about new things for their machines."

Further issues and special offers will be available to those who join and pay the club's £5 membership fee.

Prestel database for micros

PRESTEL is making a determined effort to capture the home computer market. A 30,000 page database is being set up just for micro users.

This scheme, known as Micronet, will be launched in January. The database will contain games, programs and information about computers and user groups.

As an added incentive, Prestel plans to reduce its charges for evenings and weekends.

Croydon venue for microfair

CROYDON Home Computer Fair will be held in the Greyhound Halls, Park Lane, Croydon on Saturday, September 25.

Over 40 exhibitors will be there, entry will be £1 and 50p and the show will be open from 10 am to 8 pm. More details from Ron Vogt, Computer Fairs, 359 The Strand, London WC2.

Computers' Lynx has 48K Ram and high resolution colour graphics.

Lynx unsheathes its claws

MORE details have emerged about the Computers' Lynx (*Popular Computing Weekly*, September 9).

Based around the Z80A microprocessor, the Lynx has 48K Ram, expandable to 192K, and 16K Rom. It has 24 lines x 40 characters display and a colour resolution of 248 x 256.

The 48K Ram leaves 16K available to the user in the high resolution colour mode. With additional memory expansion, the display can be boosted to 24 lines x 80 characters with a colour resolution of 248 x 512.

An enhanced form of Basic, specially developed for the Lynx by Davis Jansons, takes up 10K of Rom. The remaining 6K is used for the keyboard, monitor and screen driver.

Other features of the Lynx

include a typewriter keyboard, an internal speaker and an RS232 port. To avoid any possibility of overheating, the power supply will be external.

Though the Lynx is designed primarily for the home user, it has CP/M file management compatibility.

The hardware for the Lynx was designed by John Shirreff of G W Design Services, a Cambridge electronics firm. Finance for the project was provided through the government's small firms loan guarantee scheme.

The 48K Lynx, originally priced at £150 plus VAT, will now be sold for £225 including VAT. It will be launched officially in late October.

Computers Ltd has moved from its old address in Hills Road, Cambridge. The firm is now based at 33A Bridge Street, Cambridge CA3 4AB.

Programming award competition winners

POPULAR *Computing Weekly's* Programming Award Scheme Competition winners have been selected.

First prize goes to Phillip Brain of Crookesmoor, Sheffield, for his program *Odyssey*. He wins a Sinclair ZX Spectrum and a ZX printer.

The winners were selected last week by Brendon Gore, Editor of *Popular Computing Weekly*, and Jeremy Ruston, author and programmer.

Jeremy Ruston commented: "The competition received so many entries of a high stan-

dard that it was very difficult to decide on the winners."

Odyssey was also the winning program in the Games category.

Malcolm Davison won the Educational/Scientific section with the best presented program, *Spelling* for the 16K Spectrum.

D Swindell won the Utilities section with his impressive *ZX81 Assembler*.

Christopher Copper won the Business/Office section with *Business Accounts* for the 16K ZX81.

BBC users in independence squabble

A ROW has broken out between the two main BBC micro user groups concerning their independence.

In a letter to the magazine *Microcomputer Printout*, Sheridan Williams — co-founder of Beebug — has accused rival group Laserbug of ties with a retail outlet. He alleges "Laserbug are run by a shop called Computers For All and cannot represent their members in a truly independent way. As far as I know, the only truly independent user group is Beebug."

Sheridan Williams.

Paul Babbour, new editor of *Laserbug*, in a written reply to the letter says "Laserbug is and always has been independent of all outside bodies. While Mr Williams claims he is completely independent, I would like to know how, in the mail-out by Acorn (which supplied the guarantee card to every owner of the BBC micro) he managed to get a sheet publicising his own group."

Beebug currently has a membership of 8,500. Laserbug now has over 2,000 members.

Commodore 64 goes on sale

THE new Commodore 64 microcomputer will go on sale in the UK during the third week of September.

It will cost £299 plus VAT. At over a hundred and fifty pounds more than the Vic20, it nears the price of the 64 selling in the US at \$599.

A Commodore spokesman said: "There is an enormous perceived demand for the new machine in the UK. The initial batch will be manufactured in Santa Clara, imported, and sold through selected high street retailers."

Letters

write to Letters, Popular Computing Weekly, Hobhouse Court, 19 Whitcomb Street, London WC2

Is this misplaced enthusiasm?

There were a couple of inaccuracies in my program Screenprint which was published in *Popular Computing Weekly* July 29. The Rem statement in line 10030 should say that TS=4096 on Vics with more than 8K of memory and not 10.24. Also, in the accompanying text the calculation for NL should read:

NL=INT((PEEK(36866) AND 127)/2)

I did send in an alternate listing but this was obviously misplaced.

Ken Clark
22 Napier Avenue
Southend-on-Sea
Essex SS1 1LZ

Please help me Mister Postman

I wonder whether any of your readers can help me to obtain a copy of PCW April 29 (Planet Ruler issue). This will then enable me to complete my set of issues of your magazine.

Ian Fensome
7 Brussels Way
Luton
Bedfordshire LU3 3TQ

Penitents' stool

I have spent hours trying to make your Meltdown program work (*Popular Computing Weekly* July 29). I now realise that at least lines 6500 and 7000 are omitted with possible errors in lines 7 and 70.

Can you please advise of these and any other corrections for this program. I must say the very small print made other sections almost unreadable. A great pity as I believe that, errors excepted, the magazine is very good value for money.

M Farrant
49 Waterer Gardens
Tadworth
Surrey

You are correct, there are a couple of errors in the Meltdown program. The original program worked fine when we played it in our office. Unfortu-

nately, our cassette recorder missed out a couple of lines when we printed out the program.

To correct the program, type in line 6500 RETURN and 7000 REM MELTDOWN.

You pays yer money and . . .

I am writing to reply to Mr S Stratford's letter in Peek & Poke (July 22). It will soon be possible to download telesoftware from teletext on the BBC microcomputer — production of the unit begins in October. If Beebusers can't wait, then programs appear on Ceefax along with a tele-software newsletter (page 705).

Ian Beardsmore's reply to Mr Stratford said that a ZX Spectrum Prestel adaptor would not be possible "... let alone feasible ...". However, I was delighted to read in the following issue (July 29) that Sinclair are to build such an adaptor likely to cost from £50 — or less. Production starts on a similar adaptor for the BBC micro in early 1983.

Before investing in Prestel it must be remembered that, unlike teletext, it is not free. British Telecom charge on a time-basis for using (a) the telephone line, and (b) the Prestel computer. Some information providers also charge you to look at their pages. Prestel is a brilliant British invention but it is too expensive for the home-user at the moment, just like *Popular Computing Weekly*.

Andrew Wiseman
Hartford Post Office
68 Mayfield Road, Hartford
Huntingdon
Cambridgeshire PE18 7NJ

A partially populated b

I wish to comment on the letter "To b or not to be, that is ..." in July 29.

The model A can be fully upgraded to model B standard for around £130 if done by an Acorn dealer, and around £75 if you fit them yourself.

The only part of the tube that the model A does not have is the connector which can easily be soldered to the board — the model A board is just a partially populated model B board.

Matthew Newman
3 Harvest Bank
Hyde Heath
Amersham
Buckinghamshire

Cubic rethink . . . WHOOPEE

In your competition page 1 (July 15) you mention errors encountered on comparing cubes, eg: IF 3**3=27 THEN PRINT "WHOOPEE" will fail. However, PRINT 3**3 gives "27" so I thought of using STR\$, eg: IF VAL STR\$ 3**3=27 THEN PRINT "WHOOPEE" will give a happy response every time.

Wigan
Lancashire

Backslashing answer

Ian Beardsmore's reply to D Whittaker's query about Vic20 inverse graphics (July 22 issue) was somewhat less than helpful.

The character in question was, in fact, an inverse (or reverse) video backslash. This is not found in the Vic20 character set but does appear in the character set of the larger CBM machines. When Vic20 programs are listed using a printer on one of the larger CBMs, this character is printed in place of the inverse video £ which denotes Ctrl red on the Vic. An example of this appears in Appendix M (page 153) of the booklet *Personal Computing on the Vic20*. Your correspondent should have received a copy of this booklet with his machine.

The reason for this, at first apparently strange effect, is that machines such as the CBM 3000/4000 do not have a £ sign in their character set. There are also slight differences in the versions of the ASCII code employed on the

different machines. On the Vic20 the code for the inverse video £ is 220, on the CBM 3000/4000 this code corresponds to the inverse video backslash.

There should be no confusion with the inverse video diagonal given by shifted M, since the backslash has a vertical ascender/descender at each end.

During his discussion of this problem, Ian Beardsmore also reveals an alarming lack of appreciation of the operation of the reverse video controls on the Vic. If you have opened a print statement and then type Ctrl rvs on, an inverse video r will appear on the display, but all subsequent characters will appear as normal until the program is run (or RETURN is pressed in the immediate mode). Then, and only then, will the characters appear in reverse video. Deleting the inverse video r will cancel the command, but the inverse video r will return once you "start again".

On the other hand, in the immediate mode without a print statement, typing Ctrl rvs on will not cause an inverse video r to appear and deleting will not cancel the command — all subsequent characters will appear on the screen in reverse video until Ctrl rvs off is entered.

Manual error in Sinclair

Thank you for such a wonderful magazine.

The reason why I have put pen to paper is to tell readers that I have spotted a mistake in the Sinclair manual. It only becomes dangerous when using machine code. It is the character on page 184, code 135. The character should be "Shift Graphic 3" and not "Shift Graphic E".

Street Life

Jupiter Ace — the making of a micro

David Kelly returns to Foxhollow in pursuit of the Jupiter Ace.

Now the Jupiter Ace has arrived (*Popular Computing Weekly*, September 9) the tongues of Altwasser and Vickers have been untied and they can talk about their new micro, the machine that is not afraid to speak Forth.

The two co-designers of the Spectrum left Sinclair five months ago to develop the machine.

"I first thought in November last year that it would be a good idea to build a microcomputer," says Richard.

"I knew that I couldn't do the whole thing on my own. I can't write machine code — at least, I can't write it like Steve can.

"I turned the idea over for some time but it wasn't until January that I mentioned anything to Steve.

"I didn't know how Steve would feel about setting up on his own. I had always thought Steve was a fairly cautious sort of chap and I wasn't sure if he would be interested."

"As we talked it became clear that Steve was prepared to be adventurous — and it became clear to him that I was prepared to be adventurous — and there you are."

Both Richard and Steve wanted to do something different, so they decided that their micro should run Forth rather than Basic.

"We'd been talking before Christmas about Forth," explained Richard. "We had both independently read an article that was printed in the magazine *Byte* — and we both got quite excited about it."

Having decided to build a new micro that would run Forth, the two designers began to sort out the details of the new machine.

"We spent the last weekend in January sitting down trying to work out the basics of the Ace. We both know the Z80 processor inside out so we really had to use it, and at that stage I already had an architecture in mind.

"The Ace had to be fairly inexpensive for two reasons. You can always make a small computer bigger by hanging a selection of peripherals on it — which makes the small micro a better commercial proposition. And we obviously know so much more about making small computers.

"We agreed to spend a month evaluating the project. We both joined FIG, the

Steve Vickers (left) and Richard Altwasser, co-designers of the Jupiter Ace.

Forth Interest Group. Steve went off and bought lots of books and I started making enquiries of component manufacturers."

By mid-March they were still not making much progress and they realised that, if they were going to see the venture through, they would have to leave Sinclair. There was only one time to do that — immediately after the Spectrum launch.

"We couldn't possibly leave before, and, if we waited long after we would more than likely be heading into another of Clive's projects," says Richard. "So we left and went heading into one of our projects instead."

By this time the first draft of the hardware was already working.

"If you look at all the new computers coming out they all have new hardware — ours was to have entirely new software as well. Writing the Forth was a huge task for Steve.

"While he was doing that I redrafted the hardware, and designed the printed-circuit board. Mixed in with this I was sorting all the components — looking around the factories for someone to build it. We also approached the bank to try to get a three-month loan.

"Forth is a very well documented language. We decided on Forth 79 Standard, with some modification, and Steve built it all up from scratch.

"To say Basic is becoming the standard language for micros is very misleading — you show me two machines that run the same version of Basic. Forth is a better language. It is about ten times faster than Basic. It is more compact — we could easily do a 1K *Space Invaders* in Forth on the Ace.

"Forth is easier to learn, as the first language. Changing from Basic to Forth is

a bit like going on the continent and driving on the right: You quickly get into the way of it, but in the first 20 minutes you risk your life so many times."

The Jupiter Ace will get its full launch at the *Personal Computer World Show* when the first production run machines will be on display.

"We will build and ship 500 computers in September which will get us off the ground — production will ramp up from there according to demand.

"In addition we are going to provide a memory expansion, although with a little adaptation any Z80 peripheral can be connected because all the Z80 busses appear at the back of the Ace.

"We will be writing our own software for the machine and we are working closely with several companies who have written good things for the ZX81 and have expressed a wish to write for us.

"Most people buy a micro to learn about computers. They spend a week getting into Basic and discover they cannot produce the kind of games they are used to without learning to program in machine-code. That isn't easy so they resort to buying ready-made machine-code games. The manufacturer is selling a Basic machine to run machine-code. What the Ace does is to provide machine-code speed in an easily understood language.

"Learning to program should be easy. If you buy a car it should be as easy to drive as possible. Why should a computer be different? It is the job of designers to produce machines that my grandmother would find easy to use.

"I think," says Richard, "that the introduction of Forth is a major step in that direction. We know we are right to produce the Ace — all we have to do is convince everyone else of that."

COVER STORY

Swarm

A new game for 16K Spectrum
by Simon Lane

An experimental research station at Porton Down is working on a hush-hush project. In a quest to invent a new weapon, to match the Super Powers' terrifying nuclear arsenals, the research team is altering the genetic DNA patterns of various insects.

Black widow spiders, their poisonous bite enhanced a thousand fold, are kept under close observation. Killer ants, bred for size and ferocity, are encased in specially constructed titanium alloy cases. Even beetles, their skins toughened to withstand almost any shock, are being used as instruments of destruction.

The research team's most successful experiment has resulted in a species of hybrid bee. These bees have wingspans of 12 ft, with bodies to match. They are carnivorous and need to feed almost constantly.

Unfortunately, a swarm of the bees escaped from one of the hives. The bees are approaching a nearby city, looking for food.

You are part of an artillery unit called up to deal with the menace. Your rocket launcher is one kilometre away from the swarm, but you only have enough ammunition for one shot at each bee.

When run, the program displays rows of the giant bees on the screen. Using the keys 5, 6, 7 and 8 you must position your sights directly over each bee. Enter 0 to fire.

Full instructions are contained in the program.

User defined graphics are present in lines 80-240, 310, 320, 1087 and 1260.

Reviews

software

Winged Avenger

Work Force, 140 Wilsden Avenue, Luton, Bedfordshire.
Spectrum, 16K or 48K.
Price: £6.95 inclusive.

This is one of the first machine code games available for the Spectrum. It is a colour and sound version of a game previously released for the ZX81.

The cassette loaded with no problems from two different machines and is recorded three times on the tape. It consists of a short Basic program followed by a large chunk of bytes, so it is important not to switch off the machine the first time the screen no longer shows the loading pattern, as there is no warning on the display. As the auto-load stops, there is a brief description of the control keys and a choice of difficulty levels (0 to 6).

In order to discover how well this program emulates its big brother, I set off one dark night into the nether regions of my local fair, armed only with my courage and a pocket full of 10p pieces. The original game, *Phoenix*, sends squadrons of cosmic eggs at you that later hatch into almost indestructible vultures. The vultures pursue you relentlessly, even when their wings have been blown off by your laser cannons.

Smashing opportunity

After this Hitchcockian nightmare, there is the opportunity to smash the control craft which contains smart weapons that lock onto your base (I confess I could not get past this stage).

Work Force's version is one of the best Sinclair games so far. It covers all the stages of the arcade original — the arrival of the mother ship is particularly good. It is certainly a game to come back to again and again.

My one criticism would be that the shield control protects you too well. Kari-kazi birds that reach the bottom line hurl themselves to destruction with little damage to the home base.

In all other respects, *Winged Avenger* seems to offer good entertainment, although £6.95 does seem a little high when compared with games like Bug-Byte's *Spectral Invaders* — which is almost £2 cheaper.

Summary

A well-written high-speed action game that uses the potential of the Spectrum fairly well. Perhaps a little over-priced, but in the long run cheaper than the arcade version — and you might even win!

6-DOWN 7-UP 9-FIRE 0-BOMBS
FUEL 967 SCORE 0000 HIGH 0000

QS Scramble

QS Scramble
Quicksilver, 92 Northam Road,
Southampton
ZX81, 4K, cassette
Price: £5.50.

At any ZX fair a certain amount of indifference toward humankind is called for when moving from stand to stand.

The Quicksilver stand always attracts impenetrable crowds. Their stand is justly popular — their software and hardware is always first class.

Scramble, their new release, follows the QS tradition of concentrating on the classic arcade games.

The game has the same feel as QS's well-known *Defender* — your spaceship cruises above a changing mountainous landscape, shooting at aliens swooping down from space, and rockets being fired from the ground. In addition, you may drop bombs on the fuel dumps scattered among the mountains. Points, of course, are scored for all of these operations. With the aid of a little insert card, you may change several of the parameters to give a personalised game. You will want to make the game harder after playing a couple of times, as the basic one soon becomes too easy.

The package displays the usual high-quality artwork and the cassette itself is neatly printed with the title of the program. The tape contains, as is usual QS practice, software for the QS character and sound generators.

Summary

"Amazing", "fantastic", and other original observations from neighbouring arcade game fans were enough to convince me that Quicksilver have another worthy addition to their small but select range.

TB

Airline/Autochef

CCS, 14 Langton Way, London SE3.
ZX81, 16K cassette.
Price: £4.75 each — £8.00 both.

One of the most successful types of boardgame has been the business simulation, witness *Acquire*, *Monopoly*, et al. The ZX81 is admirably suited to this type of game — more so, in my opinion, than to the graphic arcade game, excepting the efforts of a very small, distinguished minority.

Airline puts you in the managing director's seat. Your task is to build the company into a viable business, with the help of bar charts, histograms and vicarious news flashes. You must use this information, on crewing levels, freighting profits and so on, to make decisions. As in real life, well laid plans are affected by outside events, in this case hi-jacks and crashes.

The program is broadly realistic. For instance, until capital has been built up to a reasonable level, airplanes cannot be bought, but only leased. Details such as this help to build a convincing insight into the business world.

Autochef is not some new cooking device, but the name of a restaurant chain. Again, you are in charge, and given information relevant to your business. This time you decide what type of establishment to run, what to charge for meals, whether to give your staff pay rises and so on.

Summary

Both programs feature attractive layouts and give the player a good sense of being in control of a big business. Although not detailed enough for the serious student of Business Affairs, the games are an ideal simulation for the interested teenager, and good plain fun for everybody.

hardware

Disc drive for ZX81

Macronics, 26 Spiers Close, Knowle, Solihull, West Midlands B93 9ES.

Price: £90.85 for the interface card.
£182.85 for the floppy disc drive.

This is the first disc drive to be demonstrated for use on the ZX81. It can store up to 48K of programs or data on its single sided, single density, discs. The loading speed of 24 seconds per 16K program is slow by normal disc standards, but is 21 times faster than the tape speed.

The user can either supply his own standard disc drive or buy a 5 1/4 inch disc drive from Macronics (mini-discs will be available soon).

The interface card (5 x 5 1/2 inches) plugs into a motherboard, so that a 16K Ram pack can be used as well as the printer. The motherboard simply plugs into the ZX81 and the drive is connected up via a 21-inch ribbon cable. The drive must be powered up first, but there is no indication on the drive supplied that this has happened.

The board contains a 2K Rom (soon to be expanded to 4K to cope with three drives and a Copy disc routine) which provides the 11 disc commands. There is also 2K of Ram for use by the system as workspace.

The commands can be written into any program by having the first line as LET E = USR9999. This stores all the numbers as variables so that LET E = USR DSAVE etc can be used. The variable E will then return an error code which can be checked for operator or disc errors.

Although E is used all the way through the documentation as a way of calling these machine code routines, it is not listed as a reserved variable. Variables used by the system are the commands (which take up 240 bytes of variable storage), Dir, Dsave, Dload, Stat, Write, Read, Create, Kill, Newd and the transfer parameters FS, FS(128) and R.

Dir provides a directory (which takes up the whole of the first track of the disc) of programs and data in the form of file names. These file names consist of nine letters — six letters of the name of the file (no spaces) and three letters giving the file type separated by a full stop. The user inputs both when creating the fixed length data array which acts as a file on the disc.

Each file must be in multiples of 1.28K, as it can only be stored in whole tracks. Each track is divided into 10 sectors of 128 bytes which can be Written to or Read from by using RS to transfer the data from one sector in or out of memory.

FS carries the name of the file and R is used to tell the disc operating system which sector to use. There are up to 390

Macronics disc drive for the ZX81 can store up to 48K on single sided, single density discs. It has a loading speed of 24 seconds per 16K program.

sectors available on a 48K (40 track) disc. All of this is done in Fast mode with the screen blank.

Files cannot be overwritten and must be Killed to get rid of them. Thus copying a file must be done by giving it a new name.

Newd prepares a new disc for use by checking it and installing the directory track. Stat will either give the number of free sectors on the disc or the length of the file named in FS. Dload and Dsave will load or save programs to disc and will allow programs to auto-run as well.

The documentation is good, but I would have liked to see a list of commands on one page as quick reference guide. Also, using a one dimensioned string array ie

DimRS(1,128) instead of DimRS(128) would mean that the string could be Input and thus save on memory.

It is a pity that larger Ram packs cannot be used as a full 48K of Basic memory would make better use of the disc. At the moment all 48K Ram packs also overlay the 8K—16K space with Ram which stops the operation of the disc's Rom.

Conclusion

This system will only work on the ZX80 and ZX81. It's greatest challenger will be Sinclair's microdrive. When you compare the cost, it is cheaper to buy a 48K Spectrum and a Microdrive. But ZX81 users may not want to rewrite software. SA

Thermal printer

Computer Keyboards, Glendale Park, Fernbank Road, Ascot, Berkshire.

Price: £110.97 inc VAT and postage.

This is a thermal printer for the ZX81 and ZX80 with 8K Rom. It provides three commands similar to Lprint, List and copy via Usr routines located in a 2K Rom contained in the CAI/O black box.

There is a port located in the 14K-16K area of the box's memory map and the three Eprom sockets are mapped into the 8K-14K space. There are also a number of empty sockets on the board, which allow you to upgrade to a RS232 two way modem interface.

The CAI printer is considerably larger than the Sinclair printer (10 1/2 x 7 1/2 x 4 ins) and comes in a white box with three controls, plus a flip up cover for the paper

roll. The controls are Power on, Paper advance and a lever to lift up the printing heads for inserting paper. The paper roll is twice the length of the Sinclair paper and half the price (£1.30 a roll).

All the commands for the printer are in the form of Let I=Usr(XXX) and the only variable used in pS, which contains the string to be Lprinted. The printer will stop with an error code if it is not in Fast mode (which has to be set by the user), if pS has not been set or the printer is faulty.

Conclusion

This alternative to the Sinclair printer is four times cheaper on paper and is cheaper than spending £200-£300 on a paper printer. It is expensive, but don't forget you also get a 16 line port and the option to add an RS232 interface as well. The cost of the extra components I understand will be about £40. The fast mode must be specified by the user which is annoying. SA

Open Forum

Open Forum is for you to publish your programs and ideas.

It is important that your programs are bug free before you send them in. We cannot test all of them.

Contributions should be sent to: Popular Computing Weekly, Hobhouse Court,
19 Whitcomb Street, London WC2H 7HF.

How to contribute

Each week the editor goes through all the programs that you send to Open Forum in order to find the Program of the Week.

The author of that program will qualify for DOUBLE the usual fee we pay for published programs.
(The usual fee is £10.)

Presentation hints

Programs which are most likely to be considered for the Program of the Week will be computer printed and accompanied by a cassette.

The program will be well documented, the documentation being typed with a double spacing between each line.

The documentation should start with a general description of the program and then give some detail of how the program has been constructed and of its special features.

Listings taken from a ZX Printer should be cut into convenient lengths and carefully stuck down on to white paper, avoiding any creasing.

Please enclose a stamped, self-addressed envelope.

Super Expander

on Vic-20

I am sure there are a large number of Vic20 owners who have the Super Expander cartridge. I have not yet seen your magazine publish any programs which make use of it.

Here are four short programs, each of which should be run with the cartridge plugged in.

String & nails

This program shows how curves can be created by using straight lines. The program repeats in seven different colours, and then restarts. The listing is straightforward.

Line 5 Begins the loop to change the colours, clears the screen (scnclr), and sets the colour.

Lines 10-40 Draw the outer pattern.

Lines 50-80 Draw the inner pattern with a short delay at the end of line 80.

Circle cones

This program draws two cones over each other to show how multiple circles can draw straight lines. The program repeats in seven different colours.

Line 15 Is the loop for the seven colours and sets the colour.

Lines 20-40 Draw the first cone.

Lines 50-70 Draw the second cone.

Line 70 Also clears the screen for the next colour.

Tunnel vision

This program gives the effect of looking down a tunnel with an object coming towards you and then going away. The program repeats in seven different colours.

Line 10 Is the loop for the seven colours and changes graphic modes for effect.

Lines 30-35 is the object going away from you.
Lines 40-50 is the object coming towards you.

Wine glass

This program draws a wine glass and then 'paints' the background and fills the glass with colour. Note that graphics mode 1 must be used to use the colours here:

Line 10 Sets a white border, white background, blue characters and light yellow for the auxiliary colour.

Lines 20-30 Draw the top of the glass.

Lines 40-50 Draw the stem of the glass.

Lines 60-70 Draw the base of the glass.

Line 80 Fills the glass. Then paints the background in the auxiliary colour. The colour is then changed to yellow border and green characters.

Line 90 There are 20 half density blocks here. The Char command is the same as the Print at statement as on the ZX81.

Super Expander by Andy Horrell

Meteor run

on Unexpanded Vic-20

The idea of the game is to steer your spaceship through an on-coming meteor storm. You have the option of moving left and right to avoid the meteors, but even so, you have to be very quick to remain alive for any considerable length of time.

With play, the game becomes addictive, as you are always trying to better your previous score.

Program notes:

- Lines
- 19-70 Check to see if user requires instructions
- 80-130 Set up special character generator
- 140-180 Activate new character set and commence game
- 190-210 Plot position of spaceship and stars
- 220-240 Check for movement and crash
- 250-260 Increase score
- 270-310 Perform left and right movement
- 320-410 High score and end of program routine
- 420-520 Sound and colour for crash
- 530-610 Instructions

Meteor Run by Nigel Ayling

Tennis

on ZX81

There is a distinct lack of two player games for the ZX81 and even less that have moving graphics involved. This is probably due to the relative slowness of the ZX81.

This 4K program is written almost entirely in MACHINE CODE and is for one or two players. The game is almost identical to the tennis games found on many video games. The screen shows the two bats, the tennis court and, of course, the ball. The one-player version of the game is squash practice.

To play the game is very simple. Any

key from 1 to 5 will move the left bat up, and any from z to v will move it down. Any key from 6 to 0 will move the right bat up and any from b to . will move it down.

The ball will bounce off the top and bottom walls as well as the bats. A point is scored when the ball goes out as in tennis. The winner is the first to get to 15 points.

As the program is nearly all in machine code I will not attempt to explain the workings of it. The small basic section of the program handles the scoring and Pokes the random height from which the ball will appear. When the game is finished the computer will print 'GAME OVER' and stop.

There will be no report code as this would obscure the scores which are

shown on line 24. Pressing a key will give the normal response. The Break key only operates when the ball is off the screen.

The two tables below show how to vary the game as you like. To load the program, type in a line 1 REM of 336 x's and the machine code loading program given and enter the code. Then edit out lines 200 onwards and add the small section of the Basic program. Type Run to start it.

Changes that can be made:

- POKE:
- 16839, (1-100) for overall speed — initially 10
- 16740, (2-15) for left bat position — initially 7
- 16791, (17-31) for right bat position — initially 26
- 16764, (1-5) for left bat size — initially 3
- 16815, (1-5) for right bat size — initially 3

PROGRAM OF THE WEEK

Tennis
by Brian Cadge

Aeroplane

on Spectrum

An aeroplane from which you drop bombs to destroy an alien city, flies across the screen. If you manage to destroy the city you can go on to the next city and continue to build up your score.

You can run out of fuel (level displayed at the top of the screen), you can run out of bombs or you can crash.

To make the game harder you can reduce the number of bombs (v) in Line 5, or you can make the fuel run out faster in Line 605 (eg Let f=f-.05). You can only have one bomb dropping at a time. To load the program LOAD "Aeroplane".

The variables of the program are as follows:

- s = Score
- v = Number of bombs remaining
- f = Fuel
- a,b = Co-ordinates of buildings
- x,y = Co-ordinates of plane
- p,q = Co-ordinates of bomb
- d = Number of building blocks in the city

Line 10 Asks if you want instructions. Instructions are from Line 9999 to 9160.

Lines 70 to 95 set up user graphics
graphic a = exploding building
q = bomb
p = building

Lines 97 to 130 print a random city — obtained by graphic p

Line 125 counts the number of buildings

Line 140 prints the fuel gauge

Lines 200 to 470 set up user graphics
graphic o = tail of plane
i = body of plane
i = nose of plane

Line 600 prints plane

To do this use "space, graphic o, graphic i, graphic i".

Line 601 finds out if the space in front of the plane is a building (ATTR = 50). If it is then GOTO 710 (plane explodes and program re-starts)

Line 605 reduces the fuel, f if the plane flies across y co-ordinate 5.

Line 606 prints a space on the fuel gauge at f decreases

Line 607 When fuel runs out (f=5) the plane crashes. (Line 8000)

Line 610 moves plane up when Key "7" is pressed

Line 620 moves plane down when Key "6" is pressed

Line 645 prints Score

Line 647 prints Bombs left

Line 648 prints High Score

Line 650 drops a bomb when key "0" is pressed and finds out if no bombs are left (ie GOTO 900)

Line 655 finds if a bomb has been dropped. If it has not (ie p=0 q=0) then it jumps the bomb dropping.

Line 660 drops the bomb

Line 667 finds if bomb has hit building (ATTR=50), prints exploding building, resets p and q to 0 and adds 10 to the score. The explosion is obtained by a graphic a.

Line 670 prints the bomb — obtained by a graphic q

Line 690 finds if the buildings have been destroyed. If they have (ie d=S/10) then GOTO 800

Line 710 prints exploding plane, obtained by "graphic a, graphic a, graphic a"

Line 730 Game restarts

Line 800 gives instructions at the end of a city

Line 820 Game restarts

Line 890 gives instructions after running out of bombs

Line 9000 prints plane crashing after running out of fuel. Plane is obtained by "space, graphic o, graphic i, graphic i"

Line 9002 prints plane crashing if it hits the ground.

Explosion is obtained by "graphic a, graphic a, graphic a"

Line 9300 finds if falling plane crashes into building (ATTR=50)

Lines 9990 to 9160 print instructions.

Aeroplane
by Paul Haigh

Bomb Alley

on Spectrum

The objective of the game is to demolish a city of skyscrapers using an aircraft equipped with bombs and short-range missiles.

The aircraft with its 100 bombs and 200 missiles flies from *Print Position 0,0* to *Print Position 21,31*.

A bomb will demolish the top four storeys of a building directly below, and a missile the top storey of a building at the same height. Flying the aircraft into a building will end the game. The first two skyscrapers must be destroyed by bombs to complete the game. Flying next to them will explode the aircraft.

Points are scored as the plane moves towards 21,31 and for each storey demolished by a bomb. At the end of each game a score is given with the highest score attained so far.

Program notes:

- Line 1000 User defined graphics for aircraft.
- Line 1500 Instructions.
- Line 2000 Flight of aircraft and weapon controls.
- Line 3000 Fire missile.
- Line 4000 Drop bomb.
- Line 8000 End of game and scores.
- Line 9000 Draw random city of 32 skyscrapers.

DELETE Lines 2070 and 2090 to increase aircraft speed.
Change LINES 2020 and 8030 to alter scoring method.
INKEYS 'I' to fire missile.
INKEYS 'I' to drop bomb.
All Q's are graphic.

Scramble

by Neil Eckersley

Scramble

Vic20

This is a version of the popular arcade game. Your sector has been given the task of destroying the planet Lomillalor. The other ships have been destroyed by surface nuclear missiles. The mission is in your hands.

Your spies have managed to disable the tunnel's defensive system, so all you have to do is destroy as much as possible in the tunnel. The tunnel is made up of cliffs and valleys which makes some things impossible to destroy.

Although there is a safe path through the tunnel you must guide your ship, so that you can destroy the vital fuel dumps and so you can continue on your mission a little while longer.

At the top of the screen the running score and amount of fuel remaining is shown. The best score for the game so far is 820.

All keyboard directions are shown in the instructions. The program runs on the unexpanded Vic, but can be used without any modification with any amount of memory.

Program notes:

Lines

6-10 Set-up of variables according to amount of memory

1998-2006 Move screen by one space to the left
2007-2014 End of program

3150-3210 Check which key is pressed

0602-0602 Explosion when hit occurs, and adjust score

10001-10004 End of program
11000-12110 Explosion of ship

15000-15019 Instructions

```

Planet

on BBC Micro

This program produces an animated picture of Saturn by revolving the rings. The program starts by drawing stars followed by Saturn itself, then after the drawing is finished the program animates the rings.

The program works by redefining the flashing colours in mode 2. The program starts by drawing random stars (Lines 50 to 120) and setting the flashing colours to white.

Then the lower half of Saturn is drawn (Line 170) using *Proccircle*. The rings are then drawn using *Proccring*, which draws a 48 sided ellipse containing all the flashing colours in sequence.

The top half of Saturn is drawn, which also erases the rings behind Saturn. The animation is then produced by *Proccycle* which cycles through all the flashing colours setting one to black and the rest to white.

Since the rings are drawn using these colours in sequence, black bands will be seen to circle the planet.

A GREAT NEW COMPETITION WORTH £THOUSANDS TO THE WINNER

Whizz-Kid '82

Fancy your chances?

F We're looking for a bright young thing who can out-shine all the commercial software houses and come up with a sparkling new program that can be marketed commercially.

We want you to prove you can write a selling program and if you win the competition you'll be well on the way to making big money. The winner will receive:

1. A Dragon 32 computer.
2. Advice from *Popular Computing Weekly* on how to market and sell the winning software and how to form and finance the company to do so.
3. £2,000-worth of free advertising in *Popular Computing Weekly*.

Entries to the award scheme must be accompanied by at least four out of five of the numbered coupons published in *Popular Computing Weekly* throughout September. The closing date for the competition is October 18. The winning entry will be announced in the issue published on November 18.

Rules

1. There is no limit on the number of entries you can send in, but each entry must be accompanied by four differently numbered competition coupons.
2. Closing date for entries is October 18, 1982.
3. The names of the winners will be announced in the November 18 issue of Popular Computing Weekly.
4. The Judges' decision is final.
5. No employees of Sunshine Publications Ltd, or their families, will be eligible to enter the competition.

The winner will be the author who submits the most commercially viable program together with a written outline of the author's own proposals on how he would run his software house and why he would like to do it. The judge will be *Popular Computing Weekly* editor, Brendon Gore.

If a number of equally good and commercially viable programs are submitted the decision of the overall winner will be based on the best accompanying written outline of the author's proposals for running a software house.

Popular Computing Weekly

Whizz-Kid '82 Scheme

Fill in this coupon. When you have collected four differently numbered coupons, send them with your program to: *Popular Computing Weekly*, Whizz-Kid '82, Hobhouse Court, 19 Whitcomb Street, London WC2.

Spectrum

In this new slot various contributors explore different aspects of the ZX Spectrum.

Function line displayed in 3-D graphics

Ian Reynolds gives a three dimensional view of plotting.

This program runs on a 16K or 48K Spectrum. It produces a three dimensional view of the function held at line 1010. You can input any function at line 1010 to produce stunning effects on the screen.

There is a simple, but very effective, "hidden line removal" routine comprised of lines 5, 10, 1022, 1023, 1026, 1050 and 1060.

When run, the program will request "resolution", which determines the spacing between the points plotted. A value of four gives a detailed plot, 10 gives a reasonable plot and 20 produces a fast but crude display. A resolution of four takes between 15 and 25 minutes, depending on the function at line 1010.

Experimenting with different functions and resolutions will give you some idea of the Spectrum's graphics capabilities. The following examples produce interesting displays:

```
Resolution Line 1010
4      LET t = EXP t/80
10     LET t = (SIN(t*3)+COS t)/4
5      LET t = LN ABS COS t/10
10     LET t = SGN COS (4*t)/10
5      LET t = - SIN t*(1-COS t)/2
```

1010 LET t=-EXP t/80

```
1 BORDER 0: PAPER 0: CLS
3 INPUT "resolution" s
5 DIM p(250,2)
10 FOR f=1 TO 250: LET p(f,2)=
255: IF f>140 THEN LET p(f,2)=f
12 NEXT f: BEEP .5,30
15 FOR f=-50 TO 50 STEP s
20 LET a=f
25 LET b=50-ABS f
30 FOR g=-70 TO 70
35 LET c=70-ABS g
40 GO SUB 1000
50 NEXT g
55 IF f=50 THEN STOP
60 FOR a=f+1 TO f+s-1
65 LET b=50-ABS a
70 FOR g=-70 TO 70 STEP s
75 LET c=70-ABS g
80 GO SUB 1000
90 NEXT g
100 NEXT a
110 NEXT f
1000 LET t=b*c/800
1005 LET r=a+g+121
1010 LET t=-EXP t/80
1020 LET t=INT (80+a-t*50)

1070 INK 5
1080 GO TO 1027
```

1010 LET t=COS (t*4)/5

Sound & vision

Sounding in the generation gap

This program, which runs on an unexpanded Vic20, produces sound using all four sound generators.

On running, the screen displays the letters A to D (left) and W to Z (right). After each letter, you must input a series of numbers eg A 128 255 1. The first and second sets of numbers can have any value between 0 and 255, providing the second number is larger than the first. The third number is the *Step* between the first two numbers.

After entering the program, press "2". This will produce a demonstration of a sound routine contained in lines 3999—4150.

Having listened to the demonstration sound, press any key. This will produce the response "Sound 0 or 1 or 2". Pressing 0 or 1 will allow you to hear the sounds produced by the inputted numbers. To change the sound, simply enter "Y" and input the numbers of your choice.

John Ingham

You can share your own favourite Sound or Vision programs with other readers by sending lists with explanations to us at *Popular Computing Weekly*.

Programming

Dots and dashes fall for beeps

Paul Newman presents a
morse code trainer for the
Spectrum.

This short program will allow the Spectrum to *Beep* morse characters as they are typed on the keyboard. The character speed as given is quite slow and may be altered to suit by a simple change to line 35. In-code comments should explain most lines, except for line 10 where the morse characters are coded into a *Data* statement.

The morse dots and dashes are represented as binary 0 and 1 respectively. Thus the character "L" which is dot, dash, dot, dot, in morse code, may be represented as the binary notation 0100. In order that successive division by two (effectively binary division) may "strip" each binary digit off in the correct order, the notation is reversed — viz 0010. Finally, the binary notation is given a "guard bit" to form the complete binary representation of "L" — 10010 — which is binary for 18.

The data statement in line 10 contains the representation for 0–9 and A–Z. Note that they are given in the order groupings recommended by the Radio Society of Great Britain (EISH/TMO etc) which are specially designed to assist in the learning of morse code. I have done it this way to help the user to design his own morse code tutor.

When learning morse code, it is fruitless learning the 'dots & dashes'. The only way of becoming proficient at morse is to learn how each letter sounds.

When altering line 35, remember to preserve the 1.3 dot:dash ratio. If you are seriously learning morse, alter line 35 to *BEEP .13+.26*(x=1),0* to give you a reasonably slow character speed. Factors of .07 and .14 will produce a character speed of about 12 words per minute, which is the Radio Amateurs examination speed requirement. Text should be typed in lower case.

Most of the remaining details of the program are indicated in the *Rem* statements.

The Spectrum can be connected to a radio transmitter using a simple one-chip interface and I/O port.

Paul Newman, founder of the Sinclair Amateur Radio User Group.

Paul Newman is the founder of SARUG UK, the Sinclair Amateur Radio Users Group. He has long been an amateur radio enthusiast. During 1980 he became interested in using microcomputers to control radio equipment. Early in 1981 he became the first British member of ASARUG, the American Sinclair radio enthusiasts group. In November 1981 he formed the present UK group, SARUG UK. Mem-

bers of the group keep in touch over the air and through the pages of the SARUG newsletter which he edits. The group now has 175 members. Membership is £5 and is open to all amateur radio licence holders or anyone with a proven interest in amateur radio. For further information contact Paul Newman (G4 1NP), 3 Red House Lane, Leiston, Suffolk.

Peek & poke

Peek your problems to our address. Ian Beardsmore will poke back an answer.

TO REVERSE

John Grain of Mill Street, Witney, Oxford, writes:

Q Could you please tell me if there is any way of using a statement to reverse a number just input into the computer (ZX Spectrum), for example to change 1472 to 2714?

I am writing a business program and need this operation to help me with an index code that I am developing. I hope you can help.

A This has already been done. This neat solution was developed by Jeremy Ruston:

```
10 INPUT AS
20 LET BS = ""
30 FOR T = 1 TO LEN(AS)
40 LET BS = AS (T) + BS
50 NEXT T
60 PRINT BS
```

TRANSMITTER LINK-UPS

Sean Connelly of Valley Road, Macclesfield, Cheshire, writes:

Q I will soon be getting a ZX Spectrum. As a great radio enthusiast, I would like to connect my two channel radio transmitter to my computer. Could you suggest an input/output port to do the job? Would a digital/analogue converter be suitable? I would be able to do any such modification myself if necessary.

A The direct answer is that I do not know how to connect a Spectrum to a two way transmitter. If you have access to a copy of our July 1 edition you will see it featured a whole page about SARUG UK, the Sinclair Amateur Radio Users Group in the United Kingdom.

To link a ZX81 to a transmitter, the group reckons that you need a 356 byte program and a I/O port with a single chip interface. For further information contact Paul Newman, (G4INP), 3 Red House Lane, Leiston, Suffolk.

If you find that you still need help, try Stephen

Adam's book *20 Simple Electronic Projects For the ZX81 and other Computers*. One of the programs in there is an A/D converter. The book is available from Interface, 44-46 Earls Court Road, London W8 6EJ.

SHARP'S THE WORD

David Hale of Mushoka Avenue, Bents Green, Sheffield, writes:

Q I am looking for a hand held computer that can be used to assist me in my model car racing. It's task would be to take lap times to 1/100th of a second — times taken by hand operated press button — then to time a second car in the same way. The information would be used to immediately calculate where the two cars should be in relation to each other in a given period of time or number of laps, given various speeds.

It would be useful if it could emit sounds instead of necessarily displaying the answer on a screen. I have considered the Sharp PC 1211, but it can only work to 1/10th of a second and it does not have sound.

Last November, Panasonic had a hand held computer at the NEC Birmingham, which could work to 1/50th of a second and had a range of eight octaves. The problem is that it is as yet only available in the US and I do not know if it will do the job. Should I try to import one? Alternatively, could you advise me of another hand held micro that would do the job?

A I have held this letter for a few weeks, vainly waiting a reply from National Panasonic. The company over here know very little. The only information they have is a glossy sales leaflet that they promised to send me some weeks ago. It still has not arrived.

All I can add to what you already know is that it is due for launch over here sometime in mid-1983. I would not advise you to import one on such little knowledge.

As for an alternative, the only one that springs to mind is the new Sharp PC 1500. It is hand held, and does have a tone generator on board. The company to contact, not only about the Sharp but about hand held micros in general, is: Tempus, 38 Burleigh Street, Cambridge CB1 1DG.

EXORCIST'S SUCCESS

Miles Clarke of Worcester Road, Oxford, writes:

Q I am trying to write a program on my Vic20 that will store information. I want to enter numbers and other facts on tape, for use at a later time. However, when I Load the tape and Run it, the information disappears, even if it was on the screen. How do I store information on a tape?

A The Run command clears all variables and starts the program again from scratch. You do not say how you input the information, but I presume that you are using something like Input AS. This can be overcome by using the Goto command.

You do not give details of the size of your program, nor how many variables you use for other things. All I can do is give a small sub-routine for storing information in a single string, which can be added to. Run the program initially, and thereafter always use Goto 30. This is true whether you want to add more information now, or at a later date after Loading. Of course, you can use Run if you want to clear the variable and start again.

```
10 INPUT AS
20 PRINT AS
30 INPUT BS
40 AS = AS+BS
50 PRINT AS
```

PROBLEMS OF TEMPERAMENT

Eric Smith of Lime Street, Gracemount, Stirlingshire, writes:

Q I have a ZX81 and printer. I have noticed that the printer does not feed the paper very well and quite often

stops altogether. This problem only occurred when I started using paper ordered from Sinclair. Is there any answer to this or am I stuck with having to pull the paper through while printing?

While on this subject do you know if it is possible for the Sinclair printer to be interfaced with the TI158 calculator? The cost of the Texas Instruments printer is prohibitive.

A Problems seem to be cropping up with the ZX printer at the moment. Whether this is just a case of one bad batch, or an as yet undiagnosed design fault, I cannot say. I know that my printer has given me no problems whatsoever, though I have had to deal with a temperamental one here in the office.

First, check that the printer is clean and set up correctly. This may sound obvious, but dirt does build up and if it clogs the rubber roller it will stop the paper moving.

Another alternative is to slightly tighten the two springs that hold the lower roller in place. Finally, you can slightly widen the Vs in which the paper roll spindles are located, though I would not advise this unless all else has failed.

When pulling the paper through, do not pull it very hard. A firm even pressure is what is needed. If this does not work, then wiggle the paper from side to side. If the machine is not sparking, this will often get it going, though I do not know why.

I do not know if the Sinclair can be interfaced directly to the TI158, but I would doubt it. Your best bet is to get in touch with Microtanic Software of 235 Friern Road, Dulwich, London. They make a 'Printerface' which allows the ZX printer to be used with several computers.

● Stop agonising over that problem. Write to Ian Beardsmore, Peek & Poke, Popular Computing Weekly, Hobhouse Court, 19 Whitcomb Street, London WC2 7HF.

Swapshop

01-930 2256

Are you one of the thousands of owners of an old computer? Do you want to sell it?

Why not sell it through Swap Shop? In each issue between now and the end of October we will publish a FREE entry in Swap Shop for anyone who has a computer to sell. All you have to do is phone Swap Shop on 01-830 3266 and tell us your name, address, telephone number, the type and specification of the computer you have to sell, and the price you want for it.

Swap Shop is limited to private individuals who have a computer to sell. No more than 20 words may be booked and the information you supply must be limited to the computer. You may not include information about accompanying software or hardware. If you would prefer to write in with your copy for Swap Shop please mark your letter clearly as Swap Shop. Regular Computing Weekly, Hobhouse Court, 19 Whitcomb Street, London WC2 7HF.

Swap Shop is run solely as a service to Regular Computing Weekly readers. We can therefore accept no responsibility for any errors or omissions in any copy used.

CLASSIFIED ADVERTISING RATES:

Line by line: For private individuals, 20p per word, minimum 10 words.

For companies, traders, and all commercial bodies, 40p per word, minimum 20 words.

Semi-display: £10 per single column centimetre, minimum length 3 cm. (Please supply A/W as PMT. Or supply rough setting instructions.)

Conditions: All copy for Classified section must be pre-paid. Cheques and postal orders should arrive at least two weeks before the publication date.

If you wish to discuss your ad, please ring Alastair Macintosh 01-930 3840.

Here's my classified ad.

Competitions

Puzzle No 22

Here is the second of the Ancient Algorithms where cavemen rearrange piles of stones into other piles of stones in interesting ways.

What is being calculated this week?

Tony Roberts

Rules

The winner of the puzzle will be the reader who, in the opinion of *Popular Computing Weekly*, has submitted the best and most imaginative solution.

Envelopes containing entries should be clearly marked 'PUZZLE'.

The closing date for the competition is Tuesday, September 28.

Solution to Puzzle No 18

To find the number of cars on each occasion use the formula $N \times (N + 1) / 2$ to find successive triangular numbers, T . This expression can then be used in a program like the one shown here to find the answers:

```
10 LET C = 0
20 LET N = 2
30 LET T = N * (N + 1) / 2
40 LET X = SORT
50 IF ABS (X - INT (X + 1E - 8)) < .000001 THEN
  GOSUB 100
60 LET N = N + 1
```

```
70 GOTO 30
100 PRINT T
110 LET C = C + 1
120 IF C = 3 THEN STOP
130 RETURN
```

Line 50 checks to see if the square root of each T is an integer (or near enough, allowing for the accuracy of the square-root function). If the T value is a square it is printed out and the program will stop after three such numbers, when $C = 3$.

On the first day there were 36 cars in the park.

1. PUT A HEAP OF STONES ON THE GROUND. PICK ONE UP AND PUT IT ON A HANDY LEDGE.

2. THEN PUT AS MANY STONES AS ARE IN THE HEAP INTO SMALL PILES EACH AS BIG AS THERE ARE STONES ON THE LEDGE.

3. AND PUT ONE STONE FROM EACH PILE ONTO THE LEDGE TOO.

4. NOW THROW HALF THE STONES ON THE LEDGE AWAY! NB. $\frac{1}{2}$ A STONE IS STILL A STONE!

5. COUNT THE STONES ON THE LEDGE. IF THERE ARE NOW AS MANY AS LAST TIME YOU COUNTED ... STOP. IF NOT, THEN GO BACK TO 2.

Q. WHAT HAVE YOU BEEN CALCULATING?

TONY GARDNER ILLU

Two weeks later there were 1225 cars present. The next possible number that is both a square and a triangle is 41,616. This is 204 squared so the car park is 204 spaces square. Since each space is 12×6 feet the car park is 2448 feet long and 1224 feet wide.

Winner of Puzzle No 18

The winner is P Ranklor, Rue Sauvage, St Sampsons, Guernsey, Channel Islands, who receives £10. He adds: The last answer is more cars than in the whole of Guernsey!

Sinclair ZX Spectrum

**16K or 48K RAM...
full-size moving-
key keyboard...
colour and sound...
high-resolution
graphics...**

**From only
£125!**

First, there was the world-beating Sinclair ZX80. The first personal computer for under £100.

Then, the ZX81. With up to 16K RAM available, and the ZX Printer. Giving more power and more flexibility. Together, they've sold over 500,000 so far, to make Sinclair world leaders in personal computing. And the ZX81 remains the ideal low-cost introduction to computing.

Now there's the ZX Spectrum! With up to 48K of RAM. A full-size moving-key keyboard. Vivid colour and sound. High-resolution graphics. And a low price that's unrivalled.

Professional power— personal computer price!

The ZX Spectrum incorporates all the proven features of the ZX81. But its new 16K BASIC ROM dramatically increases your computing power.

You have access to a range of 8 colours for foreground, background and border, together with a sound generator and high-resolution graphics.

You have the facility to support separate data files.

You have a choice of storage capacities (governed by the amount of RAM). 16K of RAM (which you can upgrade later to 48K of RAM) or a massive 48K of RAM.

Yet the price of the Spectrum 16K is an amazing £125! Even the popular 48K version costs only £175!

You may decide to begin with the 16K version. If so, you can still return it later for an upgrade. The cost? Around £60.

Ready to use today, easy to expand tomorrow

Your ZX Spectrum comes with a mains adaptor and all the necessary leads to connect to most cassette recorders and TVs (colour or black and white).

Employing Sinclair BASIC (now used in over 500,000 computers worldwide) the ZX Spectrum comes complete with two manuals which together represent a detailed course in BASIC programming. Whether you're a beginner or a competent programmer, you'll find them both of immense help. Depending on your computer experience, you'll quickly be moving into the colourful world of ZX Spectrum professional-level computing.

There's no need to stop there. The ZX Printer—available now—is fully compatible with the ZX Spectrum. And later this year there will be Microdrives for massive amounts of extra on-line storage, plus an RS232/network interface board.

Key features of the Sinclair ZX Spectrum

- Full colour—8 colours each for foreground, background and border, plus flashing and brightness-intensity control.
- Sound—BEEP command with variable pitch and duration.
- Massive RAM—16K or 48K.
- Full-size moving-key keyboard—all keys at normal typewriter pitch, with repeat facility on each key.
- High-resolution—256 dots horizontally x 192 vertically, each individually addressable for true high-resolution graphics.
- ASCII character set—with upper- and lower-case characters.
- Teletext-compatible—user software can generate 40 characters per line or other settings.
- High speed LOAD & SAVE—16K in 100 seconds via cassette, with VERIFY & MERGE for programs and separate data files.
- Sinclair 16K extended BASIC—incorporating unique 'one-touch' keyword entry, syntax check, and report codes.

Probably the fastest microcomputer in the universe the **JUPITER ACE** only £89.95.

All inclusive Price

For £89.95 you receive your Jupiter Ace, a mains adaptor, all the leads needed to connect to most cassette recorders and T.V.s (colour or black and white), a software catalogue and a manual.

The manual is a complete introduction to the world of personal computing and a course in FORTH programming on the Ace.

Even if you are a complete newcomer to computers, the manual will guide you step by step from first principles to confident programming.

The price includes postage packing and V.A.T.

Available soon

● 16K memory expansion for around £35.00. This will increase the memory of the Ace to 19K.

● A parallel printer interface for around £25.00. This will convert the Ace to anything from fast dot matrix to letter quality daisy wheel printers

Key Features

- Revolutionary microcomputer language FORTH.
- Full-size moving-key keyboard.
- User-defined high-resolution graphics.
- Programmable sound generator.
- Floating point arithmetic.
- Fast cassette interface.
- Upper and lower case ascii character set.
- 24 x 32 character flicker-free display.

The Jupiter Ace uses FORTH

The Ace is set apart from all other personal computers on the market by its use of a revolutionary language called 'FORTH'. Some computer languages are easy for humans to understand, others are easy for computers; FORTH is most unusual in being both. Its underlying principles are so simple that it takes even a newcomer to computers only a few minutes to learn how to do calculations on the Ace, yet the very same principles are powerful enough to allow you to invent your own extensions to the language itself.

At the same time, the memory-saving coded form used to store your programs inside the Ace allows it to obey them very fast — typically in less than a tenth of the time it would take to do the same thing using a different language. Amongst other things, this makes the Ace ideal for games.

FORTH's unique combination of speed, versatility and ease of programming has already made it a prime choice for professional applications as diverse as pub games and radio telescopes, and gained it an enthusiastic national user group. Now the Jupiter Ace can bring this addictive language into your own home.

Designed by Jupiter Cantab

Leading computer Designers Richard Altwasser and Steven Vickers have a reputation for pushing technology forwards. After playing the major role in creating the ZX Spectrum they formed Jupiter Cantab to develop their latest brainchild the Jupiter Ace.

Technical Specification

Hardware

Processor/Memory

Z80A running at 3.25 MHz.
8K bytes ROM 3K bytes RAM.

Input

40 moving-key keyboard with auto-repeat on every key.

Output

Memory-mapped 32 x 24 character display with high resolution user graphics. Output to drive normal UHF TV set on channel 36.

Sound

Provided by internal loudspeaker.

Cassette

Load Save & Verify at 1500 baud, separate data storage.

Software, FORTH

Data Structures

Integer, Floating point and String data may be held as constants, variables or arrays with multiple dimensions and mixed data types.

Control Structures

IF-THEN-ELSE, DO-LOOP, BEGIN-WHILE-REPEAT, BEGIN-UNTIL, all may be mixed and nested to any depth.

Operators

Mathematical +, -, X, ÷.
Logical AND, OR, NOT, XOR.

Comparison <, >, =.

Program Editing

FORTH words may be listed, edited and redefined. Comments are preserved when words are compiled.

Order Form

The Jupiter Ace is available only by mail order. Please allow up to 28 days for delivery.

Send cheque or postal order with the form to:—
